

EDUCATION

New York University*Ph.D. in Computer Science***New York, NY***September 2026 - June 2031***University of Oxford***M.Sc. in Advanced Computer Science***Oxford, UK***October 2025 – September 2026***University of California Irvine***B.Sc. (Hons) in Computer Science***Irvine, CA***September 2021 – June 2025*

- GPA: 3.7 (undergraduate), 4.0 (graduate).
- Selected coursework (undergraduate): Linear Algebra I, II, and III, Project in Reinforcement Learning.
- Selected coursework (graduate): Algorithmic Game Theory, Probabilistic Learning, Deep Learning, Scientific Computing

RESEARCH EXPERIENCE

University of Oxford / Nokia Bell Labs*Research Assistant w/ Jakob Foerster***Oxford, UK***July 2025 – Present*

- Constructed a dataset to post-train LLMs for the emulation of 5G network messages.
- Post-trained LLMs using SFT and RL alongside a custom tokenizer in order to improve emulation performance.
- Performed multi-agent reinforcement learning experiments to learn emergent network protocols.

University of California Irvine*Research Assistant w/ Roy Fox***Irvine, CA***October 2024 – Present*

- Working paper on benchmarking complex multi-agent RL with tractable optimality.
- Ongoing experiments aiming to leverage offline data to accelerate large-scale multi-agent reinforcement learning tasks.

University of Oxford*Research Assistant w/ Jakob Foerster***Oxford, UK***June 2024 – March 2025*

- Independently proposed a project to Prof. Foerster, leading to a fully-funded internship.
- Led writing, experimental design, and method design for a paper on utilising min-max optimisation to derive theoretical guarantees for unsupervised environment design, published at Reinforcement Learning Conference 2025.

University of California Irvine*Research Assistant w/ Ioannis Panageas***Irvine, CA***April 2023 – June 2025*

- Managed experiments for a project on RL in adversarial team Markov games in PyTorch.
- Re-implemented models and training code in JAX to improve experiment runtime.
- Learned techniques relating to min-max, nonconvex, and convex optimization.

RESEARCH PAPERS

An Optimisation Framework for Unsupervised Environment DesignNathan Monette, Alistair Letcher, Michael Beukman, Matthew T. Jackson, Alexander D. Goldie, Jakob N. Foerster[\[View\]](#)

- Reinforcement Learning Conference 2025

Leveraging Offline Data for Large-Scale Multi-Agent Reinforcement LearningJB Lanier*, Nathan Monette*, Roy Fox[\[View\]](#)

- Working Paper

INVITED TALKS

An Optimisation Framework for Unsupervised Environment Design

2025

- Oral talk and poster presentation at Reinforcement Learning Conference 2025.

What Does Game Theory Teach Us about Open-Endedness?

2025

- Extended talk at the 2025 London Open Endedness Summit at Imperial College London.

SERVICE

UC Irvine Computer Science Department Curriculum Committee

Irvine, CA

Student Representative

September 2023 – June 2025

- Served as the sole representative of over 2,000 undergraduate students to a faculty committee in charge of curriculum design.
- Authored the first draft of the department's new undergraduate degree requirements.
- Presented community feedback in course evaluation and design from around 100 students and alumni.

HACKATHONS

UK Government AI Incubator Hackathon

London, UK

Perf-nect

November 2024

- Awarded finalist in government sponsored AI hackathon related to energy sustainability and governance.
- Cooperated with a team of 4 UK government researchers on creating an app to handle applications for resources to join the national power grid.
- Implemented a Bradley-Terry preference model to create a human-in-the-loop system to accelerate processing of a large backlog of applications.
- Invited to present our work at 10 Downing Street to UK Prime Minister Keir Starmer.

Hack at UCI

Irvine, CA

ZotScheduler

February 2023

- Achieved a second place prize out of over 60 teams, with over 400 total participants in the hackathon.
- Cooperated with two teammates to construct a working app in less than 36 hours.
- Utilized ensemble tree regression models (XGBoost), and search algorithms to recommend schedules to students based on a list of potential classes.

TECHNICAL SKILLS

- **Programming Languages:** Python, SQL, JS, C++
- **ML/AI:** PyTorch, JAX, Reinforcement Learning, Game Theory, Optimisation
